Weekly Accomplishments

The student trainee should give a summary of the tasks performed during the week and how it was accomplished.

Day 58 - I continued finalizing the website audit and the turnover documentation. As part of the pre-launch preparations, I replaced all placeholder and personal email addresses across the site with the company's preferred official emails. Additionally, I activated a free license of Wordfence Security to establish a web application firewall, ensuring the site is protected against brute-force attempts and other common vulnerabilities.

Day 59 - I implemented further optimizations based on the website audit, successfully raising the overall site performance score to 87. I conducted a comprehensive Wordfence malware scan and verified that the login audit trail was functioning correctly. I also updated the contact information, ensuring that all company phone numbers—consolidated concisely to feature the main trunk line—and email addresses were properly formatted as clickable, tap-to-call links for better UX. Finally, I configured the robots.txt file to selectively manage search engine crawlers, and ran an external security evaluation which yielded an A+ rating for the site.

Day 60 - I resolved a user interface issue on the 404 Error page by adjusting the theme's text colors to match the corporate branding, ensuring the page now displays properly and guides users back to the active site. To provide management with traffic insights, I installed and configured the WP Statistics plugin to track daily visitor metrics and page views. Throughout the day, I also made final revisions to the website audit document to correct minor imperfections.

Day 61 - My focus today was on plugin maintenance and version control. I systematically updated the majority of the installed plugins to their latest stable versions. This proactive maintenance ensures the site remains secure, prevents near-term compatibility issues, and clears out unnecessary Wordfence security warnings regarding outdated software, leaving a clean dashboard for the incoming administrator.

Day 62 - I conducted a final, comprehensive functionality test across the entire website, identifying and resolving the last remaining minor bugs. Following this quality assurance check, I presented the completed website build to Ma'am Leah. I walked her through all the deployed features and backend systems, clearly explaining which elements are fully operational and noting which specific sections currently utilize placeholder text and imagery until the final corporate assets are provided.
