

WEEKLY JOURNAL

Last Name RIO	First Name JOSHUA ALNIE	MI P.
STI Campus STI COLLEGE TANAUAN	Program BSIT	Year Level 4
Host Company MAYO HOLDINGS AND CONSTRUCTION (MHC), INC.	Department Assigned to MITSD	
Schedule (Date): FEBRUARY 16, 2026, FEBRUARY 18 - FEBRUARY 20, 2026	Number of Working Hours: 32 HRS	

Weekly Accomplishments

The student trainee should give a summary of the tasks performed during the week and how it was accomplished.

On the first day of the week, I observed how problems on the web application are identified and handled. Ma'am Yvette even showed me a programmer's thought process by walking me through UI audits, brainstorming, computations, and algorithms of the incoming system. I also implemented the brand colors on this day.

By the second day, I continued developing my assigned website. I changed the color scheme to improve visibility and readability, creating a better and more cohesive look across the pages.

On the third day, I presented what I had created in WordPress and replaced the drafts that I made with the info I got from their company profile, but Sir Bernabe pointed out that the header was missing a few elements and he said that the client would need a section that has feedback, product, customer feedback which made me think he was asking for testimonials. Later, I helped replace an RJ45 connector on a broken camera network line in the warehouse department.

On the fourth, I updated the colors on the website I am working on after Ma'am Yvette advised me to look at Dribbble for design inspiration and I improved the images that were given to me in the company profile to make the pictures in the website more clear and cleaner. After lunch, I helped Sir Jerico add new RJ45 connectors to the cameras in the HR department. He taught me that making sure the wire jacket is fully inserted into the RJ45 makes the connection both cleaner and stronger.

Over these four days, I balanced web development tasks with practical hardware troubleshooting. I learned about problem-solving and UI audits from a junior programmer, and I continuously improved my assigned WordPress site based on design and functionality feedback from Sir Bernabe and Ma'am Yvette. Additionally, I gained hands-on experience repairing network camera lines, specifically learning the proper technique for crimping RJ45 connectors with Sir Jerico. Until this day I still read articles about development in the daily dev as part of my daily routine to being a better developer.
