STI Campus STI COLLEGE TANAUAN	Program BSIT	Year Level 4
Host Company MAYO HOLDINGS AND CONSTRUCTION (MHC), INC.	Department Assigned to MITSD	
Schedule (Date): FEBRUARY 4, 2026 - FEBRUARY 6, 2026	Number of Working Hours: 24 HRS	

Weekly Accomplishments

The student trainee should give a summary of the tasks performed during the week and how it was accomplished.

My first week as an intern at MHCI is heavily focused on my orientation.

On the first day, I was able to complete my HR onboarding process, which included a review of the Company Rules and Regulations and the Company Profiles that are under them. I was able to familiarize myself with the four subsidiaries: Mayo Holdings and Construction, Inc., ISO Tech, SETS, Inc. and MYFC. HR personnel then toured me to their Key Departments to understand the organizational workflow, including SOG, CSG, Accounting, Billing, Clinic, HR, Warehouse, and Purchasing. My first task that I was able to accomplish was assisting Sir Jerico for fixing the CCTV but before we started, I received instruction from Sir Bernabe CCTV maintenance protocols. Key takeaways that are in the safety requirement is that to always work in pairs when fixing units and strict prohibition of maintenance during a drizzle or rain. I saw how the CCTVs were fixed, learned different types of CCTV, and different types of tools that are being used to maintain them. On that day, I was fortunate enough to complete some cold calls in conducting inventory checks on company-issued mobile phones. I am also required to make a JAR (Job Accomplished Report) at the end of my shift and a TTD (Things To Do) at the start of my shift to Sir Bernabe.

On the next day, reading articles on daily.dev is one of the must practices I must carry out to stay updated with the current trends. I start reading as soon as I arrive. The next task assisted Mam Yvette audited the current codebase to establish a cohesive Design System. We utilized Inspect Element and manually reviewed CSS (Cascading Style Sheets) in Visual Studio code to identify repetitive patterns. I also helped Sir Charles and Sir Jericho in setting up the laptops and phones for a Holy Mass that is conducted onsite in a Chapel. My last task for that day is to research how to make reusable components in Figma.

To conclude the week, I observed how the routers are fixed and how to set them up. After that the task I was assigned is the continuation of inventory for SETS, Inc. and assisted Sir Charles with the printer in the billing department.
